MINGLEMATIC

Rigola Social Meeting/Dating Script

Version 2.1 Installation Manual

As soon as your purchase is complete you will receive "rigola21.zip". Please unzip it.

File structure:

| application | artisan | bundles | assets | laravel | index.php (PHP) | paths.php (PHP) |

| storage | uploads | cache |

Those will be the files and folders you will receive in the zip package. Upload them to your server via an FTP client.

ZIP
rigola21.zip

Make these folder writable. All files and folders inside should be writable too, so make it a writable recursively.

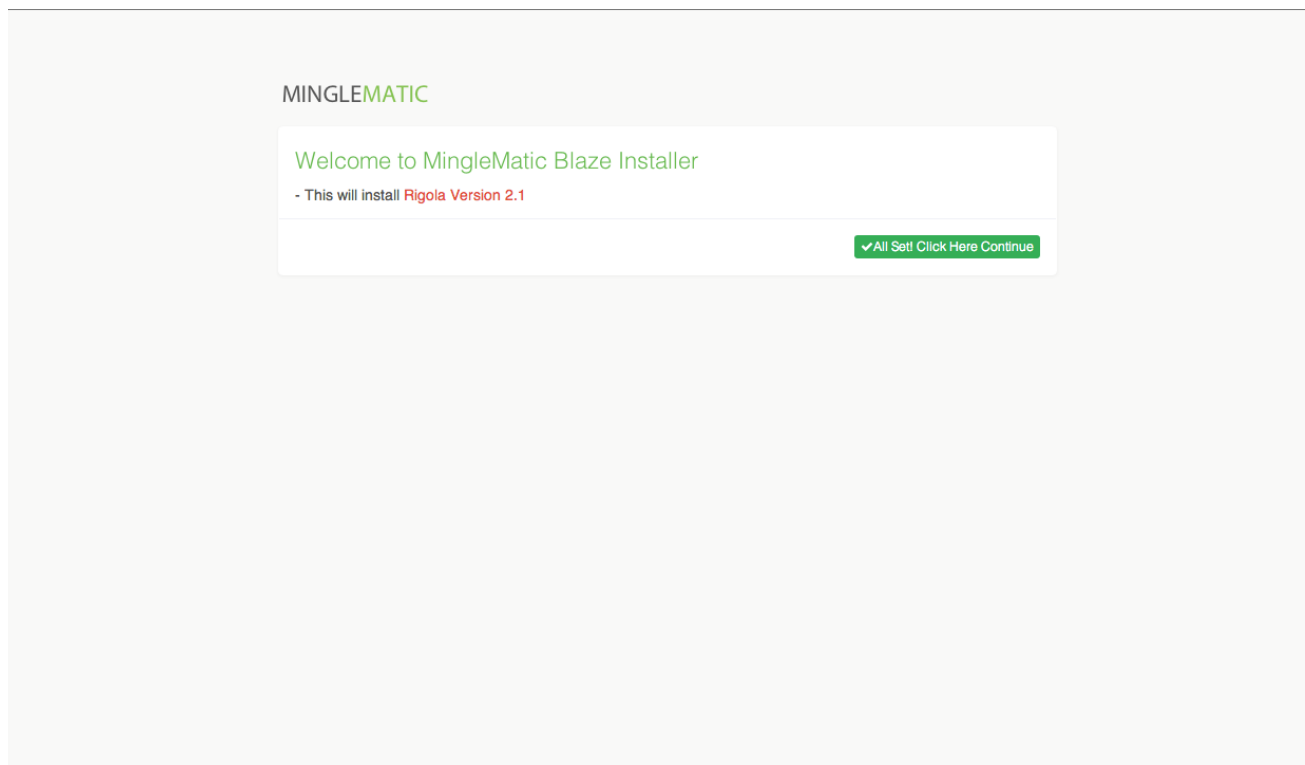

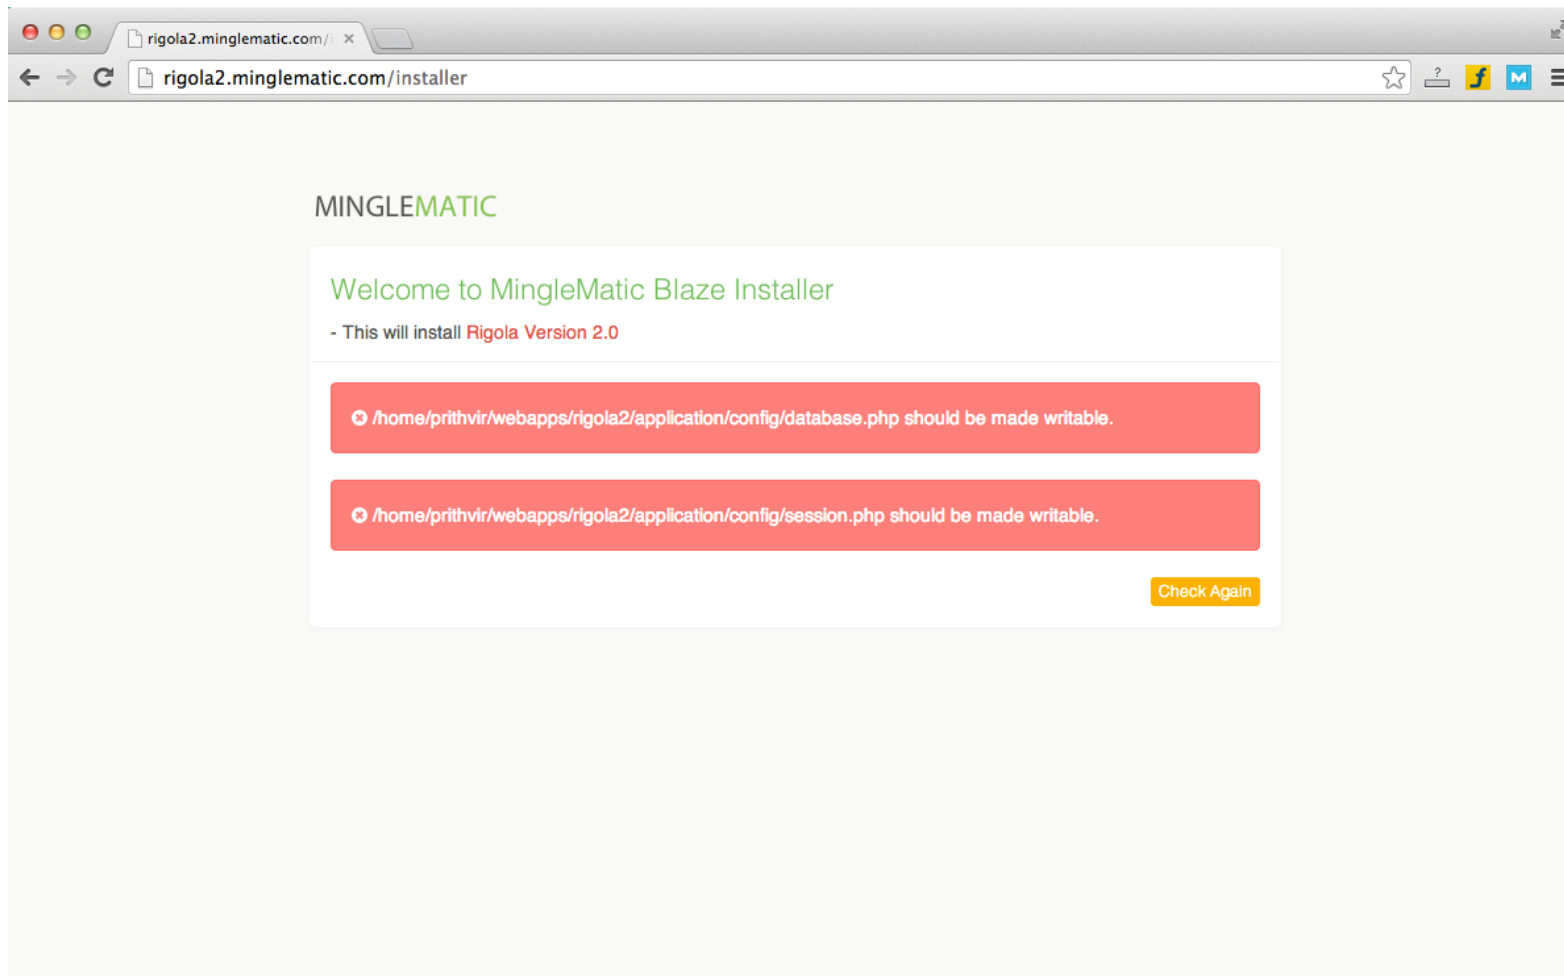

storage   cache

Open your application via the Browser. You will get a page like this:

In case if there are errors, the first page of the installer will display them. Mostly they will look something like this:
If you see those errors, then please proceed with making those listed files writable.

When all is ok. Click continue and you will go to the database setup page.

Fill in with the necessary details and click continue.

The installer will now setup the DB and you will be faced with this screen:
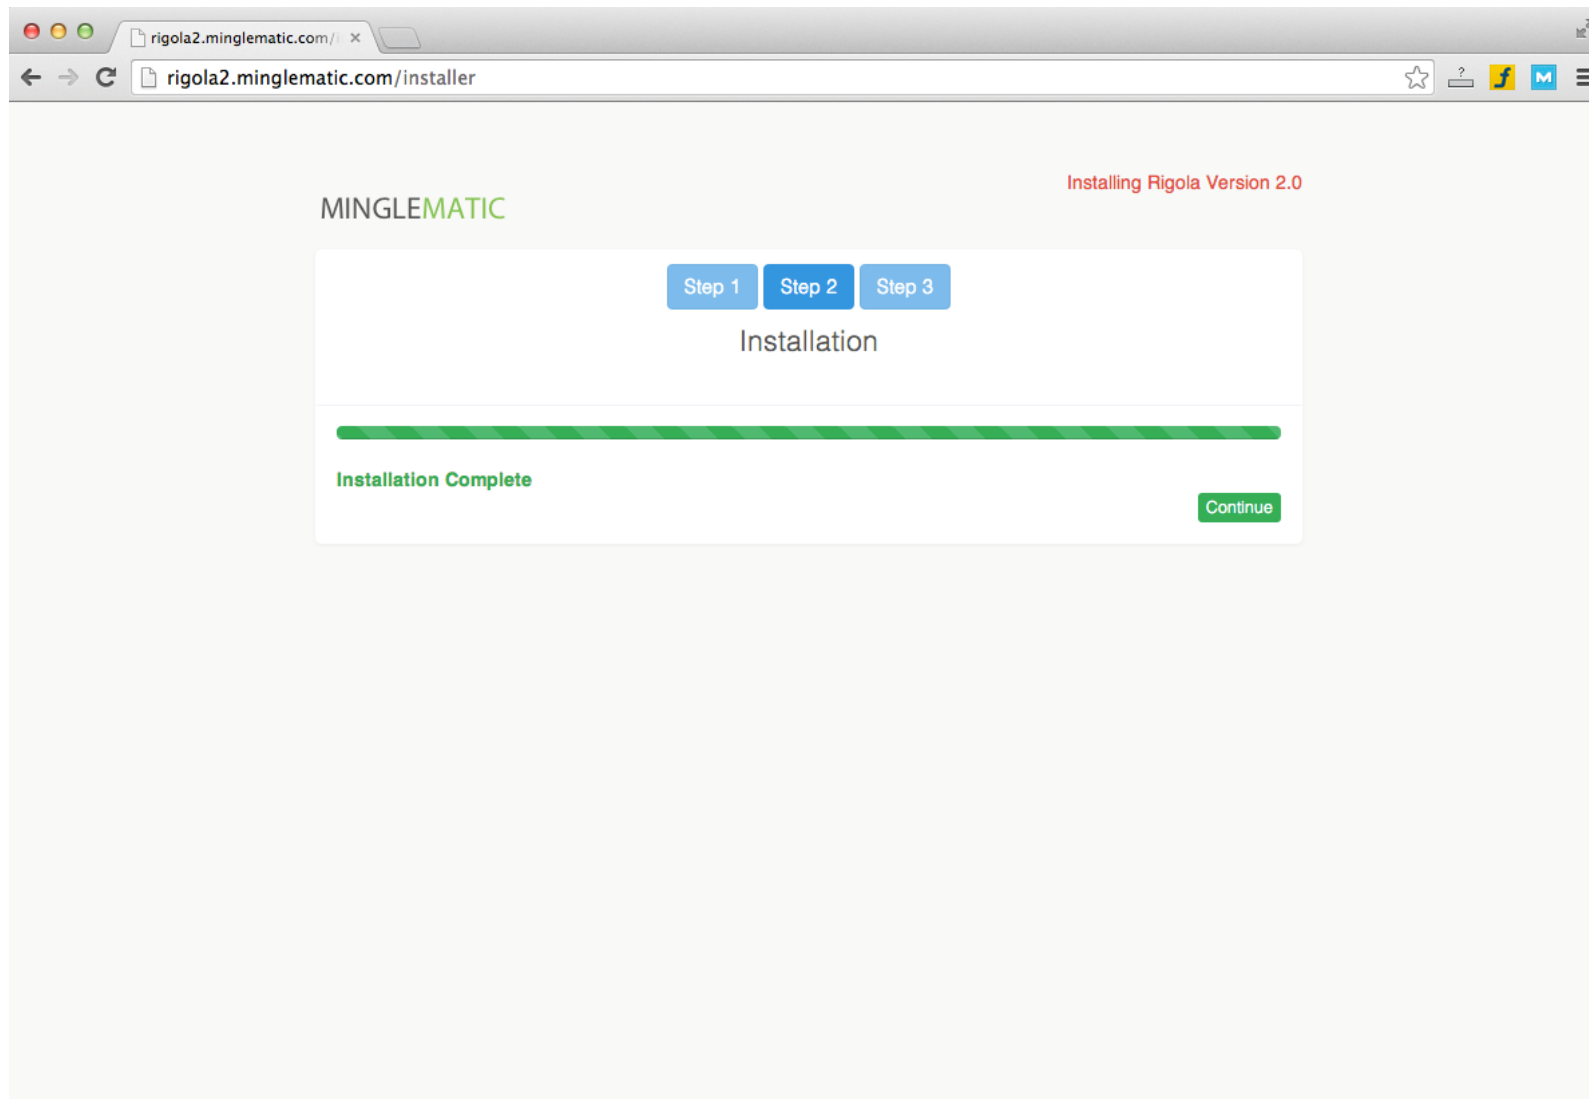

Now setup your application with the following details.

If you get this screen. You are done with the installation!
When the installation is complete, please open this file:

Now open /application/bundles.php
Comment out or remove line number 38. This is to ensure the installer module is disabled and not accessible by public.

```php
36   return array(
37
38       'installer' => array('auto' => true),
39       'laracaptcha' => array('auto' => true, 'handles' => 'captcha'),
40       'hybridauth' => array('auto' => true),
41       'messages' => array('auto' => true  ),
42       'email' => array('auto' => true),
43       'date' => array('auto' => true),
44       'user' => array('auto' => true),
45       'encounters' => array('auto' => true),
46       'photorater' => array('auto' => true),
47       'notifications' => array('auto' => true),
48       'credits' => array('auto' => true),
49       'chat' => array('auto' => true),
